General Overprovisioning Guidance

25% Rule

If future network applications are defined and potential demand for unanticipated service is low

50% Rule

If future network applications are defined and potential demand for unanticipated service is high

100% Rule

If future network applications are uncertain and potential demand for unanticipated service is very high or subsequent installations are extremely difficult

Orlando, FL | February 4-8

Average Fiber Counts Are Growing Very Fast

Day 1: You need over 3000 fibers to connect two hyperscale data centers together

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Quick Math Shows Staggering Splicing Labor

	Ribbon	Single Fiber
Fiber Count	1728F	1728F
Number of splices	144	1728
Time per splice	8 minutes (\$40 per splice)	4 minutes (\$25 per splice)
Total Splicing Time(hrs.)	19 hours	115 hours

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Loose Tube, Ribbon and Micro Cables Can Support Low to Very High Fiber Counts

Fiber Counts

Loose Tube, Ribbon and Micro Cables Can Support Low to Very High Fiber Counts

Micro Cables Offer Scalability and Pay as You Go Model

Day One: 2 x 288 = 576F

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Micro Cables Offer Scalability and Pay as You Go Model

Day One: $2 \times 288 = 576F$

Future: $7 \times 288 = 2016F$

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Strategic Choices That Matter

- Scalability
- Signal Latency
- Signal Loss
- Deployment Velocity

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

When Latency Really Matters

In the world of high-frequency trading, a 1 ms advantage can be worth \$100M/year to a financial institution*

**Source: Infinera, 2010*

- NYSE measures latency in **microseconds (μs)**, not ms
- With 22.4B messages and 15B trades daily, even a 100 μs latency advantage can help

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Excess Fiber Length (EFL)

- In any cable design, the length of the fiber must be longer than the cable itself to protect the fiber against stress under cable tension.
- This is known as **Excess Fiber Length (EFL)**

Stranded Loose Tube (LT) Cable

EFL = Typically 2-8 percent of cable length

Ribbon Cable (Central Tube)

EFL = Typically ~0.2 percent of cable length

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Time of Flight Comparison

MIAMI, FL

JACKSONVILLE, FL

Transmission length
550 km

Loose Tube Cable, 144 F

Excess fiber length 5% (typical range 2-8%)

Time of flight 2826 μ s

Ribbon Cable, 144 F

Excess fiber length 0.2%

Time of flight 2697 μ s

Latency advantage 129 μ s

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Strategic Choices That Matter

- Scalability
- Signal Latency
- Signal Loss
- Deployment Velocity

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

When Loss Really Matters

1. Signal generation= # of lit fibers x # of wavelengths per fiber x transceiver cost
2. Regeneration= # of lit fibers x # of wavelengths per fiber x transponder cost
3. Amplification= number of lit fibers x amplifier cost

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Generally, Loose Tube Cables Will Have Lower Attenuation Values Than Equivalent Ribbon Cables

Wavelengths	Loose Tube	Micro Cable	Ribbon
1310nm	0.34	0.34	0.40
1550nm	0.22	0.22	0.30

Low Loss Fiber Can Help Lower System Costs

Wavelengths	Standard SMF (db/km)	Low Loss SMF (db/km)
1310nm	0.34	0.33
1550nm	0.18	0.17

If system link is > 100km, it is worth the discussion

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Strategic Choices That Matter

- Scalability
- Signal Latency
- Signal Loss
- Deployment Velocity

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cable Choices Can Impact Deployment Velocity

- Cable Construction
- Brownfield Capacity Adds
- Greenfield Capacity

CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Reduction of Prep Time

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Simple Cable Prep Can Add Up

	Gel filled	Gel free no ripcords/ binders
Cable ends to prep	100	100
Time to prep	23 minutes	3 minutes
Total Time to splice	37 hours	5 hours
Total labor cost at \$20 an hour	\$720	\$100

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cost-Effective Capacity Upgrades in a Brownfield

Standard Loose Tube Cable

Day 1 capacity = 2 x 144 F = 288 F

Duct OD/ID: 1.25 in
Cable OD: 15.8 mm

Day one cost of
10 km installation:
\$1.34M

Assumptions

10 km **METRO** route

Civil Works
\$120k/km

Cable Blowing

\$3k/km

Duct and
144 F Loose Tube
Cable

\$4k/km

Microduct Bundle and
2 x 144 F Micro Cables

\$9.3k/km

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Same Upgrade Approach Cost a Fortune

Standard Loose Tube Cable

Day 1 capacity = 2 x 144 F = 288 F

Duct OD/ID: 1.25 in
Cable OD: 15.8 mm

Day one cost of
10 km installation:
\$1.34M

Standard Loose Tube Cable Upgrade

Duct OD/ID: 1.25 in
Cable OD: 15.8 mm

Capacity (fiber count) increase requires
retrenching and installation of additional 10
km duct and new cable

Upgrade Cost = **\$1.27M**

Upgrade Time = **7-10 months**

Assumptions

10 km **METRO** route

Civil Works
\$120k/km

Cable Blowing

\$3k/km

Duct and
144 F Loose Tube
Cable

\$4k/km

Microduct Bundle and
2 x 144 F Micro Cables

\$9.3k/km

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Override With Microduct Can Reduce Future Upgrade Cost

Standard Loose Tube Cable

Day 1 capacity = 2 x 144 F = 288 F

Duct OD/ID: 1.25 in
Cable OD: 15.8 mm

Day one cost of
10 km installation:
\$1.34M

Microduct override

A **microduct override** can be a simple, faster and more cost-effective alternative to digging...

Assumptions

10 km **METRO** route

Civil Works
\$120k/km

Cable Blowing

\$3k/km

Duct and
144 F Loose Tube
Cable

\$4k/km

Microduct Bundle and
2 x 144 F Micro Cables

\$9.3k/km

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Better Greenfield Approach

Standard Loose Tube Cable

Day 1 capacity = 2 x 144 F = 288 F

Duct OD/ID: 1.25 in
Cable OD: 15.8 mm

Day one cost of
10 km installation:
\$1.34M

Microducts and Micro Cables

Day 1 capacity = 2 x 144 F = 288 F

Microducts: 7 x 12.7/10 mm
Bundle OD: 1.64 in
Micro cable OD: 8.1 mm

Day one cost of
10 km installation:
\$1.35M

Assumptions

10 km **METRO** route

Civil Works

\$120k/km

Cable Blowing

\$3k/km

Duct and
144 F Loose Tube
Cable

\$4k/km

Microduct Bundle and
2 x 144 F Micro Cables

\$9.3k/km

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Future Upgrade Costs Are Dramatically Reduced

Standard Loose Tube Cable

Day 1 capacity = 2 x 144 F = 288 F

Duct OD/ID: 1.25 in
Cable OD: 15.8 mm

Day one cost of
10 km installation:
\$1.34M

Microducts and Micro Cables

Day 1 capacity = 2 x 144 F = 288 F

Microducts: 7 x 12.7/10 mm
Bundle OD: 1.64 in
Micro cable OD: 8.1 mm

Day one cost of
10 km installation:
\$1.35M

Capacity (fiber count) increase requires blowing of additional micro cable into vacant microduct only

Upgrade Cost = **\$0.06M**
Upgrade Time = **1-2 days**

Assumptions

10 km **METRO** route

Civil Works
\$120k/km

Cable Blowing

\$3k/km

Duct and
144 F Loose Tube
Cable

\$4k/km

Microduct Bundle and
2 x 144 F Micro Cables

\$9.3k/km
